Profile

Web Developer and Digital Creative with a background in Software Engineering and experience developing company websites and applications for the operational needs of public institutions. Experience covers requirements analysis, UI/UX design, implementation, testing, and deployment. Skilled in integrating databases and authentication, implementing automated testing, and producing graphic designs, photography, videos, and motion graphics to support branding and digital marketing activities.

Work Experience

PT EluckyGame Technology Asia

September 2025 – September 2026

Digital Creative | Web Development, UI/UX & QA

- Developed and maintained company websites by translating product requirements and design specifications into web interfaces.
- Designed user flows, wireframes, and responsive interfaces to define user journeys and the visual presentation of digital products.
- Performed functional testing, identified bugs, and communicated findings to development and product teams to support fixes and feature improvements.
- Produced graphic designs, photography, video, and motion graphics for branding and digital marketing.

Dinas Komunikasi, Informatika, Persandian Kabupaten Cianjur

January 2024 – July 2024

Internship — Software Development & Digital Content

- Developed a handover document management application (BAST), covering staff requirements analysis, UI/UX design, implementation, testing, and technical documentation.
- Managed the department's website and social media content, including visual assets, copywriting, publication scheduling, and performance monitoring.
- Handled photography, videography, and editing to document official departmental events, producing materials for publication and institutional archives.

Projects

Spall Spill Natsx

2026 – Present

Independent Project • Product Design & Full-Stack Web Development • Currently in Development

- Develop a digital identity and content discovery platform for individuals, creators, affiliates, and micro, small, and medium enterprises, connecting profiles, product and resource catalogs, and marketplace links.
- Design 9 core user journeys, including onboarding, profile publishing, catalog management, searches for specific references and creator-specific content, and expanded commerce features without account migration.
- Build the platform foundation with Next.js, React, TypeScript, Supabase/PostgreSQL, Vercel, and Cloudflare. Use Supabase Auth for authentication, with server-side authorization and Row Level Security to control data access. Separate drafts from published content and implement safeguards against revision conflicts.
- Develop automated tests to verify application functionality and database access rules, and run checks through CI to detect errors during development.

Smart Attendance System

2025

Academic Project • Full-Stack Development & Computer Vision

- Developed an attendance system with RFID and 1:1 facial verification to validate student identities and help prevent proxy attendance. Supported arrival, departure, and school activity sessions, role and schedule management, attendance reconciliation, and CSV/PDF exports.
- Designed an authenticated Device API with consistent attendance rules for the simulator and RFID/camera integration. Implemented atomic and idempotent transactions to maintain record consistency and prevent duplicate processing. Prepared the architecture for physical device integration.
- Implemented Next.js, React, TypeScript, Supabase/PostgreSQL, and a private facial verification service using Python, FastAPI, OpenCV YuNet, and SFace. Stored biometric embeddings without raw verification images and implemented testing with Vitest, pytest, and GitHub Actions.

Handover Document Management System (BAST)

2024

Internship Project • UI/UX & Web Development

- Developed a handover document management application for internal use at Diskominfo, Cianjur Regency. The system remained in use after the internship ended.
- Translated staff workflows into user journeys, interfaces, and application data management. Conducted functional testing to verify that the system met operational requirements.

Education

SMK Amaliah 1 Ciawi

Graduated 2025

Software Engineering — Vocational High School

Skills

- **Web development:** Next.js, React, TypeScript, JavaScript, PHP, Laravel, Python, FastAPI, HTML, CSS, and responsive web development.
- **API and data integration:** REST API integration, authenticated Device API, SQL, CRUD, PostgreSQL, Supabase, Supabase Auth, MySQL, Firebase Authentication, Firestore, server authorization, and Row Level Security.
- **Quality assurance:** Functional testing, regression testing, responsive testing, automated end-to-end testing, bug reporting, and feature validation. Tools: Playwright, Vitest, React Testing Library, pgTAP, and pytest.
- **Cloud and development environments:** Vercel, Cloudflare, Cloudinary, Git/GitHub, GitHub Actions, Docker, Docker Compose, Linux (Ubuntu/Kali), WSL2, and VirtualBox.
- **UI/UX and product design:** Figma, user flows, wireframing, prototyping, and responsive interface design.
- **Web performance and SEO:** Lighthouse, Core Web Vitals, Google Search Console, technical SEO, sitemaps, and indexing.
- **Creative production:** Graphic design, photography, videography, photo/video editing, and motion graphics. Tools: Adobe Photoshop, Adobe Illustrator, Adobe Premiere Pro, and CapCut.
- **AI-assisted workflow:** ChatGPT, OpenAI Codex, and Google Stitch to support application development and design.
- **Soft skills:** Communication, teamwork, analytical thinking, problem-solving, explaining technical decisions, and openness to feedback.
- **Languages:** Indonesian — Fluent • English — Intermediate • German — Basic
