

Nafisa Juliansah Saputra

Full-Stack Developer

Kabupaten Bogor, Jawa Barat • nafisajuliansahsaputra@gmail.com • +62895336164328

Portfolio: natsx.my.id • GitHub: github.com/nafisajuliansahsaputra • LinkedIn: linkedin.com/in/nafisa-juliansah-saputra-243487383

Profile

Full-Stack Developer with a Software Engineering background and experience building company websites, operational applications for public institutions, and independent full-stack projects. Comfortable handling product needs from flow and interface design through frontend/backend implementation, database and authentication integration, testing, and deployment. Primary focus on Next.js, React, TypeScript, Laravel/PHP, PostgreSQL/Supabase, Python/FastAPI, plus Kotlin/C#/.NET for cross-device systems, automated testing, and Git workflows.

Work Experience

PT EluckyGame Technology Asia

Sep 2025 - Sep 2026

Graphic Designer | Web Development, UI/UX & QA

- Developed and maintained the company website by translating product requirements and design specifications into responsive web interfaces.
- Performed functional testing, identified bugs, verified fixes, and communicated findings to the development and product teams.
- Designed user flows, wireframes, and interfaces to support implementation and refinement of digital products.
- Produced visual assets, photography, video, and motion graphics for branding and digital marketing as supporting creative responsibilities.

Dinas Komunikasi, Informatika, Persandian Kabupaten Cianjur

Jan 2024 - Jul 2024

Internship - Software Development & Digital Content

- Developed the Berita Acara Serah Terima Information System (BAST), covering staff requirements analysis, UI/UX design, implementation, data management, testing, and technical documentation.
- Translated administrative workflows into application flows and interfaces used to manage handover documents.
- Managed website/social media content and visual documentation of institutional activities as supporting responsibilities during the internship.

Selected Projects

Smart Attendance System

2025

Academic Project • Full-Stack Developer & Computer Vision • Complete

- Developed an RFID attendance system with 1:1 face verification, arrival/departure/activity sessions, role and schedule management, attendance reconciliation, and CSV/PDF export.
- Designed an authenticated Device API with atomic and idempotent transactions to preserve record consistency and prevent duplicate processing.
- Implemented Next.js, React, TypeScript, Supabase/PostgreSQL, Python, FastAPI, OpenCV YuNet, and SFace; testing with Vitest, pytest, and GitHub Actions.

NAT SX Controller

2026

Independent Project • Software Developer & Systems Engineer • Complete

- Developed an Android-to-Windows controller system that turns a phone into an Xbox 360-compatible gamepad using a Kotlin Android app and a C#/.NET/WPF Windows receiver.
- Designed a cross-platform full-state GamepadState protocol with sequencing, integrity checks, stale/duplicate rejection, and a watchdog to reduce stuck-input risk during connection changes.
- Built a Smart Connection Manager for USB Direct, Wi-Fi/UDP, and Bluetooth RFCOMM with health scoring, latency/jitter/packet-loss monitoring, hysteresis, cooldowns, automatic handover, and Android/Windows CI.

Sistem Informasi Berita Acara Serah Terima (BAST)

2024

Internship Project • Full-Stack Development • Complete

- Developed a handover-document management application for internal use at Diskominfo Kabupaten Cianjur with document workflows, role-based access, data management, and PDF generation.
- Translated staff workflows into user flows, interfaces, backend validation, and functional testing to support operational needs.
- Technologies: Laravel, PHP, React, TypeScript, Inertia, Tailwind CSS, MySQL/SQLite, Pest, Larastan/PHPStan, and Vite.

Spall Spill

2026 - Present

Independent Project • Full-Stack Developer & Product Designer • In Development

- Developing a digital identity and content-discovery platform for individuals, creators, affiliates, and small businesses, connecting profiles, product/resource catalogs, and marketplace links.
- Building the architecture with Next.js, React, TypeScript, Supabase/PostgreSQL, Vercel, and Cloudflare; using Supabase Auth, server-side authorization, and Row Level Security.
- Implementing draft-to-preview-to-publish workflows, stale-write protection, destination-safety scanning, media sanitization, and CI with Vitest, Playwright, pgTAP, type checks, and security scanning.

Education

SMK Amaliah 1 Ciawi

Graduated 2025

Software Engineering

Technical Skills

- Frontend: Next.js, React, TypeScript, JavaScript, HTML, CSS, responsive web development, Tailwind CSS.
- Backend & Data: PHP, Laravel, Python, FastAPI, REST API, SQL, PostgreSQL, Supabase, MySQL, Firebase/Firestore, authentication, server-side authorization, Row Level Security.
- Systems & Cross-platform: Kotlin, C#, .NET, WPF, Android, UDP, Bluetooth RFCOMM, USB AOA, protocol design, connection state management.
- Testing & DevOps: Playwright, Vitest, pytest, pgTAP, Pest, React Testing Library, Git/GitHub, GitHub Actions, Docker, Docker Compose, Vercel, Cloudflare, Cloudinary, Linux/WSL2.
- Product UI: Figma, user flows, wireframing, prototyping, responsive interface design.
- Web Performance & SEO: Lighthouse, Core Web Vitals, Google Search Console, technical SEO, sitemap, indexing.
- Supporting Creative Tools: Adobe Photoshop, Adobe Illustrator, Adobe Premiere Pro, CapCut; graphic design, photography, videography, and motion graphics.
